Problem Statement:

Online shoppers today face difficulties in finding the right products, managing their cart, and completing purchases in a secure and hassle-free manner. Existing platforms are often too complex and lack clear product information, smooth navigation, and a simple checkout process. Users also have no easy way to track their orders or view their purchase history in one place.

On the other side, sellers and admins struggle to manage product listings, monitor incoming orders, and analyze sales performance without a proper centralized system. The absence of an organized admin dashboard makes it hard to take quick business decisions and maintain the platform efficiently.

There is a clear need for a full-stack e-commerce web application — ShopEZ — that solves both these problems by providing users with a clean, secure, and easy shopping experience, and providing admins with a powerful dashboard to manage products, orders, categories, and analytics all in one place.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An online shopper looking to buy products from home	Browse products, add them to cart, and place an order quickly and securely	The platform is complicated, lacks clear product details, and the checkout process is confusing	There is no simple and organized interface that guides me from product selection to order confirmation	Frustrated and unsure whether my order was placed correctly
PS-2	An admin or seller managing an online store	Efficiently manage product listings, track customer orders, and monitor business performance	I have no centralized dashboard to view orders, update products, or see sales analytics in one place	The system lacks proper admin tools and reporting features to support business decisions	Overwhelmed and unable to grow or manage my business effectively
